

# Information Technology Services

*“Enterprise Wide Solutions and Strategies for the Future”*

USSMC, a full-service information technology firm, was founded to improve the effectiveness and efficiency of software development worldwide. Most customers have turned to us for help to improve their software development efforts in better meeting strategic organizational requirements. Typical customers include medium-size and large companies and government agencies that are either moving away from legacy systems or want to integrate legacy software with more modern technology platforms. We design customized databases and applications for both large and small businesses to allow them to track data and to analyze the state of their business. We have an in-depth understanding of Microsoft’s technologies such as Windows NT Server, Internet Information Server, and the Active Server Platform. We can also make recommendations on your Internet security strategy.

## **Other services we can provide include:**

- Design and Develop customized business solutions using Microsoft SQL Server 6.5, 7.0 and 8.0
